# Straighten your teeth with *Invisalign*

by **Dr. Natalie Nechvatal**

*"I just like to smile. Smiling's my favorite." —Will Ferrell as Elf.*

**H**ow many of us can really say that? Well, with Invisalign it's easy to have a beautiful, healthy smile.

Invisalign is discreet orthodontics for any age, and I regularly see patients gain renewed confidence when their treatment plan is complete.

**Dr. Natalie Nechvatal**

If you have crowded teeth, or widely spaced, or an overbite or underbite, we can straighten your teeth without using uncomfortable and unsightly metal braces.

Most patients chose Invisalign because they don't feel comfortable with traditional wires and brackets in their mouth.

Invisalign is virtually invisible.

And the entire process is convenient, consisting of a series of specially made clear plastic aligners, which you wear for two to three weeks at a time. At the end of the two to three weeks you receive another set of aligners and continue the process until your teeth are straight.

Although patients wear Invisalign night and day, you enjoy the flexibility to remove

your aligners for special events, eating, brushing and flossing. Most co-workers, friends and family likely won't detect that you are wearing "braces."

It's easy to be on your way to the smile of your dreams.

**"As an active mother, I chose Invisalign because they're easy. There was no lifestyle adjustment and they are so comfortable. No one even knows they are in."** —*Melanie S.*

**Editor's Note:** As a certified Invisalign provider, Dr. Nechvatal is currently offering a free consultation, including an overview of how the Invisalign aligners work, an evaluation of your situation, and answers to any questions you have. Plus, as a *Mimi* reader you will receive a **\$300 discount** if you decide to go with the treatment plan.
